Conclusions

- Performance Over Time

The year-over-year comparison between 2024 and 2025 shows that most portfolios achieved positive returns;

however, performance varied across periods, and several portfolios underperformed their market benchmarks.

- Allocation Impact

Portfolio performance was largely driven by a small number of high-weight assets.

Changes in allocation between 2024 and 2025 had a direct impact on overall returns and explain much of the variation in performance across portfolios.

- Strategy Insight

Allocation strategy plays a critical role in performance.

Portfolios with effective allocation adjustments between 2024 and 2025 were more likely to achieve stronger returns and better benchmark comparison results.

- Benchmark Comparison

Comparing portfolio performance to market indices highlights whether returns are driven by investment decisions or general market trends, especially when analyzing changes between 2024 and 2025.

- Despite positive returns, multiple portfolios underperformed their benchmarks, indicating suboptimal allocation decisions."
